

**PROPOSAL RELATING TO COOPERATION OF THE STATE OF OHIO  
IN CONSTRUCTION OF A BASIC SCIENCE BUILDING FOR A  
PROPOSED MEDICAL COLLEGE AND MEDICAL CENTER IN TOLEDO**

The following proposal seeks the support of the State of Ohio in completing the creation of a medical center for a proposed College of Medicine to be operated by the University of Toledo. This college would enroll approximately two hundred students and could graduate fifty or more doctors per year when it is in full operation. City, County and State hospitals which are all located next to each other in Toledo form an existing nucleus which would cost approximately \$40,000,000 to replace. To supplement these facilities a basic science building which will contain also residences for students, staff and interns, is needed at an approximate cost of \$5,000,000. It has been suggested that the State provide the money for the additional building needed with the understanding that the City of Toledo and Lucas County would provide funds for the operation of the new medical college.
